

FLOCK (AUTOMATIC LICENSE PLATE READER) CAMERA, EXPLAINED

A 2-minute guide for anyone who just heard about them.

That camera scans every license plate that drives past.

It records your plate, the time, and the place, then sends it to a private company's searchable database of 80,000+ cameras. You never opted in, and you cannot opt out.

WHAT THEY TELL YOU	WHY WE'RE WORRIED
"They just stop crime, and solve 10% of it."	That figure comes from Flock's own paid-for study. The researcher they hired says Flock kept back facts that hurt its pitch. No independent study shows they cut crime.
"It's local, and only used lawfully by police."	Not true. Federal agencies have been let into these cameras against state law, and officers have been arrested for using them to look up people in their own lives.

IT'S NOT JUST YOUR LOCAL POLICE

An Illinois state audit caught Flock letting federal agencies into local cameras, against state law. It goes further:

18+	officers caught misusing it They used the system to track exes and people they knew. Several were charged or convicted.
80,000+	cameras reachable in one search A single search can sweep the whole national network. Your plate does not stay in your town.
7,000+	searches that broke a city's own rules In one city these cameras were searched thousands of times, in violation of its own privacy policy.

A one-way mirror. Police can see everywhere you have driven. You cannot see who looked you up, or why.
Not even your local police hold it. A private company keeps every scan. There is no opt-out and no say in it.
Ever left a door unlocked? Flock did. Its cameras were found exposed online, viewable by anyone with no password.

What you can do

- 1. See the cameras near you at deflock.me.
- 2. Submit a public records request. It's free and takes five minutes.
- 3. Tell one neighbor. Most people have no idea the camera is there.
