

That camera just scanned your plate.

It records your plate, the make, the color, the time, and the place, then uploads it to a private company's searchable network. You never opted in, and you cannot opt out.

0.05%

of what these cameras collect is tied to a crime when it is captured. The other 99.95% is ordinary people driving.

EFF, Data Driven 2

1 in 10

reads can come back wrong. People have been pulled over at gunpoint over a misread plate.

Institute for Justice

20 billion

plate scans a month, across 5,000+ communities, feed one searchable network.

ACLU, citing Flock's figures

It gets misused, and it gets shared.

A Kansas police lieutenant was charged with using one of these systems to stalk his estranged wife. The data has been shared with ICE and used to hunt a woman who had an abortion. One surveillance vendor was hacked and traveler data ended up online.

Sources: KWCH; EFF and ACLU; EFF.

This is not left or right. It is whether a private, out-of-state company gets to track a whole community, with no warrant and no public vote.

Scan for the facts.

A two-minute read for anyone who just heard about these cameras.
