

An AI-powered camera just scanned your plate.

An ALPR (automatic license-plate reader) photographs every passing car, has AI read the plate, and uploads it to a private company's nationwide search network. Bought with your tax money.

0.05%

of what these cameras collect is tied to a crime when captured. The rest is ordinary people driving.

EFF, Data Driven 2

20 billion

plate scans a month, across 5,000+ communities, feed one searchable network.

ACLU, citing Flock's figures

How police have already misused it

- **Stalking.** At least 18 officers caught using these cameras on a romantic interest.
Institute for Justice
- **Abortion hunt.** A Texas officer searched 83,000 cameras nationwide for one woman.
404 Media; EFF
- **ICE lookups.** Thousands run by local police. No contract, no warrant.
404 Media
- **Wrong man jailed.** A San Diego man spent about a month locked up over a misread. He was five miles away.
Times of San Diego

0 public votes

No hearing. No vote. No way to opt out. That is the usual story.

Should a private company track everyone who drives through your town?

This is happening near you.

Scan to add your name. Neighbors only - no spam, just meeting dates:
